Professional Summary

Frontend-focused developer with experience building and deploying responsive web applications using modern JavaScript frameworks and CSS. I've built and maintained real-world projects across ICT/NOC roles, youth service work, and personal repositories spanning UI tools and full web apps. I bring strong frontend engineering skills, a focus on performance and usability, and the ability to translate requirements into clean, scalable, production-ready interfaces.

Core Competencies

- Frontend Development: HTML5, CSS3, JavaScript (ES6+), React.js, Tailwind CSS
 - Databases: MySQL
 - Tools: Git, GitHub, Vercel, Netlify
 - Other: Responsive Design, SEO Optimization, UI/UX Collaboration
-

Professional Experience

ICT Support / Network Operations Intern | HIS Towers

February 2024 – May 2024

- Monitored and supported network infrastructure within a NOC environment, focusing on system uptime, connectivity stability, and incident detection.
- Diagnosed and resolved hardware, software, and network faults using structured troubleshooting and escalation procedures.
- Analyzed system logs and alerts to identify root causes of failures, contributing to faster incident resolution and improved service reliability.

ICT Support Officer (NYSC) | Federal Polytechnic Bauchi

December 2025 – Present

- Provide technical support within the ICT unit, ensuring stable operation of campus systems, devices, and network services.

- Troubleshoot and resolve user-reported issues across hardware, software, and connectivity layers through systematic diagnosis and resolution.
 - Support ongoing system maintenance and operational continuity by identifying recurring issues and improving response workflows.
-

Key Projects

Christian Corps Fellowship Platform

Tech Stack: HTML, CSS, JavaScript

- Built a responsive web platform to connect Christian corps members across Nigeria, enabling community interaction, event updates, and resource sharing.
- Implemented core features including user registration flows, event listings, and basic community engagement functionality with a mobile-first layout.
- Designed to support faith-based networking and coordination during service year; deployed as a functional web application.

Ticket Management Web App

Tech Stack: React

- Developed a single-page ticket management application using react with a component-based architecture.
- Implemented structured ticket creation and tracking workflows to simulate real-world issue/request management systems.
- Focused on state handling, reusable components, and frontend application structure.
